

HIPAA Compliant Metal Storage

designed by Jaymie Rolfe

SITUATION

A large insurance company approached Vanerum•Stelter with the need for a HIPAA compliant storage unit to ensure that incoming faxes were secure and private during the overnight hours. It was important that the product would be able to protect their customer's information while holding a 60 lb. fax machine all in a single unit.

SOLUTION

The Vanerum•Stelter team went through a four step process to meet the needs and requirements of the insurance company. First, the dealer was able to watch and observe the needs of the particular client to customize the design to the office environment. The dealer then took their observations to STUdio Design for renderings of the design. We were then able to send the prototype to the customer for review before refining the design to create the final product.

RESULT

We are producing 75-100 units for the first project and the solution is now becoming a national standard for all company branch offices.

Nearly 100 products were installed in various branches across the country.

Durable locking file drawers make security simple.

Simple lines and color-matching abilities make this large unit an appealing office furnishing.

The 60 pound fax machine is stored on the pull-out shelf. The receding doors lock to personal information that may be transmitted.

The original drawing shows the pull-out shelf for the fax machine.
