

Case Study

Online Academy

An online academy needed storage for its students' belongings. The innovative digital keypad locks on these cubbie units suited a national online academy's high-tech approach to learning while allowing quick, secure and re-usable access to student belongings.

VanerumStelter Studio took part in video conferences to walk through design ideas and renderings with the school. By utilizing custom dimensions the academy was able to allow for open spaces while sectioning off different team areas in the school.

Initial Rendering of Space

Digital locks let each student choose a personal code for their assigned locker.
