

Toledo Library

SITUATION:

The customer approached our dealer with the need to create an updated contemporary, fun library/media center that would integrate into their existing facility and infrastructure.

SOLUTION:

Our Studio design team got together with the designers on the project to create an environment that incorporated technology, provided stimulating areas for studying and reading and used bright, uplifting materials. Curved structures were created that served a dual purpose – one side provided seating areas for computers while the back side provided soft seating for more relaxed situations.

Corian surfaces were used to accent the circulation desk. Existing columns were surrounded by larger surfaces to provide extra working room.

RESULT:

The students in the facility have a fun, interactive and functional space.
