

The QRPS teacher station integrates technology through 2 power and data ports.

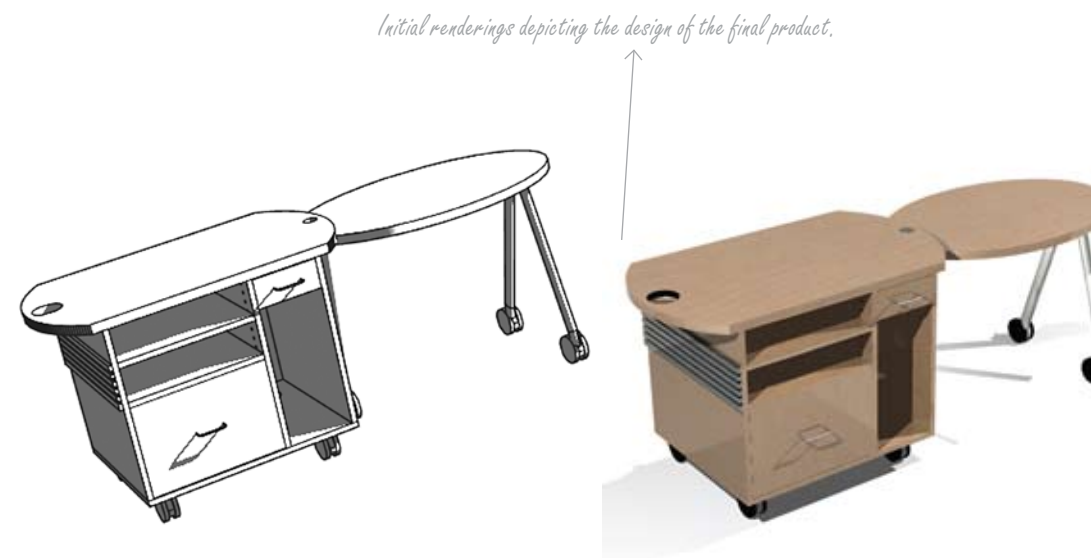

There are several different storage configurations available depending on the teachers needs.

Teacher Station
designed by Joe Chang and Jaymie Rolfe

SITUATION
A local public school system was searching for a custom teacher station that integrated technology, incorporated mobility and had plenty of workspace and storage to replace their existing standard metal teacher desk.

SOLUTION
Through the STUdio Design Team, two local architecture and design firms, and the local dealership, a custom solution that catered to the public school system's needs was created. Renderings and drawings were provided and a mock up was given to the school for use.

RESULT
A STUdio designed custom laminate mobile teacher desk that includes various storage options, a swing around workspace, and two power and data ports that resulted in securing the public school project for the dealer.

Initial renderings depicting the design of the final product.

The locking casters on the storage unit and the swing around workspace provide easy mobility.
