

The final product is sleek and storage-friendly.

Any configuration that fits can be used within the frame.

A worksurface extends off the credenza to complete a work station.

Nesting Credenza

SITUATION

Situation: the dealer approached Vanerum•Stelter with an opportunity for several hundred custom credenzas. They were in competition with another major manufacturer, and needed to provide the customer with an option that was similar to the competitive product. In addition, there were the price points had to be less expensive, and the lead time was aggressive.

SOLUTION

The Vanerum•Stelter STUdio Design Team quickly assembled a team of designers and engineers to design and create a metal-framed laminate credenza. The sturdy frame was a unitized welded structure. It housed various cases, cubbies and storage compartments. The special height allowed for nesting options underneath standard worksurfaces that the customer already had installed. A mock up of a unit was created and delivered to the customer within just a few weeks.

RESULT

Both the dealer and customer were delighted by the quick response of the Vanerum•Stelter team.
